Key Note and Clarity were high points

Presenters were full of information. They did a great job.

I enjoyed the key-note speaker the most.

Each presenter was very well-versed in the subject matter of their presentation.

Thank you for sharing about a subject that it is needed to hear so we can help our students.

Blessings

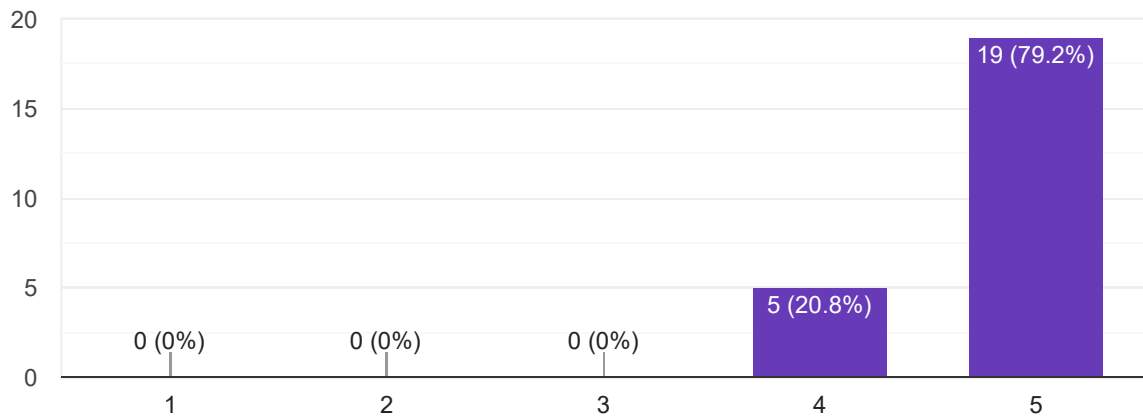

I did not listen to all but the three I listened to were very knowledgeable!

Rich content and delivery of presentation

The presenters were amazing. They offered so much information that could be applicable in the classroom.

Cultivating Resilience Through Adversity - Abigail A. Baird, Ph.D. Keynote Speaker

Her presentation was very informative. She is a great resource

interesting and dynamic

Energetic and Dynamic.

Informative

Really enjoyed some of the new neuropsych research and Dr. Baird's style was warm and personable.

Lots of good neuroscience information about the brain.

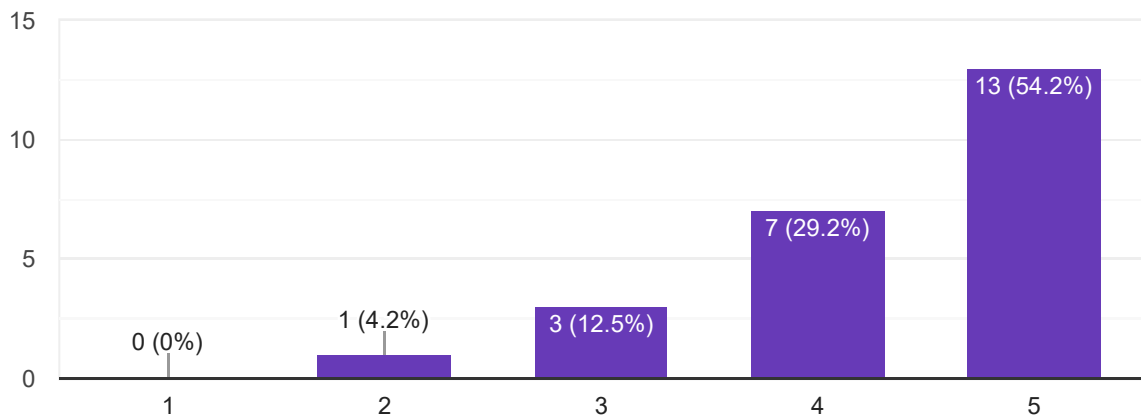

Loved her application examples.

excellent and engaging

Very insightful presenter. There were things she mentioned in her presentation that I

Classroom and Community Resilience - UT Teen Health

not interactive enough, good information, but a little dry

Thought presenter did a nice job of reinforcing keynote speaker.

Informative

Lots of good ideas to use in helping students build resiliency.

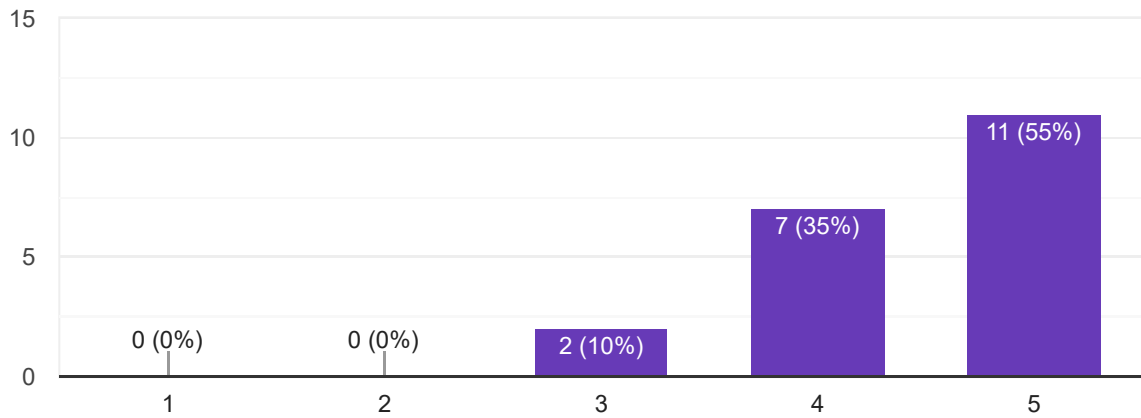

Great info but it would have come alive with personal experiences or examples.

very academically dry and hard to stay interested in

Good information to take into the classroom AND also community awareness. Excellent.

Resilience in the School Setting - The Clarity Child Guidance Center

very practical suggestions behind theory

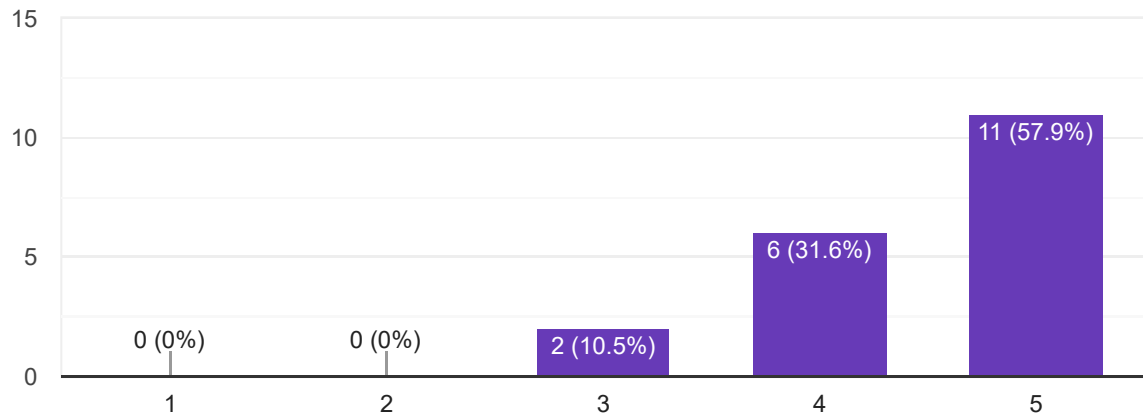

Presentation was fine. Seemed disjointed at times.

Good ideas for helping to recognize needs of students and address them in the school setting.

they could/should address this topic more deeply - it is critical

ADHD and Executive Function - Peri-Anne Chobot, Ed.D.

Hard to follow

Clearly extremely knowledgeable and experienced

Excellent information from presenter that was classroom applicable. She spoke of things we should be mindful of as teachers when understanding the minds of youths. The role of executive functions and the challenges some children may face made so much sense in a classroom setting when we see gaps.

Accommodations-Transition to Higher Education - Dianne P. Hengst, M.A., Psy.D

Did you find the information presented to be objective, balanced, and free of commercial bias?

23 responses

What would you like to see us include in future presentations?

8 responses

Mental health and inclusion

Anxiety in the classroom, auditory processing issues

transition to higher ed

More ideas for helping students in the classroom (variety of topics)

Foreign Language workshops if possible

how to foster effective trans- disciplinary collaboration

Perhaps something that addresses the learning disabled student.

Accommodation, mental health issues

The first presentation was interesting and the speaker gave some new insight into the teenage brain. I felt after the first presentation, most of the information was already covered in previous workshops I've been to the past few years. Most presentations didn't seem to offer any new research studies done or compelling insight. Overall it was ok.

Nice event.

outstanding

Engaging and information filled day of presenters and material! thank you!
